I. Statement of Reasons for Allowance:

The following is an examiner's statement of reasons for allowance:

The prior art cited herein fails to disclose a sensor ID (identification) registration method for a tire air pressure monitoring apparatus including a sensor unit built in each of tire of a vehicle for measuring an air pressure in the interior of the tire to transmit data through radio communications and a receiver mounted in a vehicle body for receiving the data transmitted from the sensor unit to identify the sensor unit on the basis of a sensor ID included in the transmitted data and to monitor the air pressure in the interior of the tire, the method comprising the steps of transmitting a specific number allocated to a control unit from the control unit to the receiver, transmitting a specific number identical to the specific number of the control unit from a sensor ID registration communication unit to the sensor unit, transmitting the data including the sensor ID and the specific number from the sensor unit, and in the receiver, making a decision as to whether or not the specific number transmitted from the control unit agrees with the specific number included in the data transmitted from the sensor unit so that, when they agree with each other, the receiver registers the sensor ID included in the transmitted data.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

II. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Okubo teaches a tire condition monitoring apparatus.

Mendez teaches a method of learning tire pressure transmitter ID.

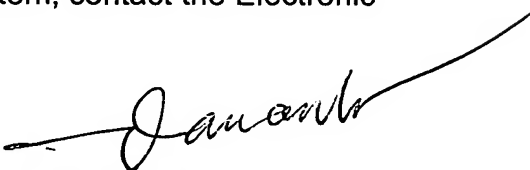

Robinson III teaches a remote tire pressure monitoring system employing coded tire ID and radio frequency transmission and enabling recalibration upon tire rotation or replacement.

Dixit teaches a tire condition sensor communication with tire location provided via vehicle-mounted ID units.
